WORK EXPERIENCE

Reliance Industries Limited | Data and Application Engineer Navi Mumbai, India (Promoted from Graduate Engineer Trainee)

August 2024 – Present

- Built an agentic AI document-extraction pipeline (LangGraph, Pydantic, local LLM) achieving 97% field-level recall and 92% routing accuracy on a variance-aware evaluation suite, with template-caching cutting extraction latency 62% on recurring vendor formats.
- Engineered a Python-based supply-chain investigation and root-cause analysis engine for ASN/GRN discrepancies, implementing transaction attribution, delivery-to-MSEG tracing, deterministic reconciliation, evidence provenance, and validation guardrails; developed 93 automated tests and golden evaluation scenarios for downstream AI-driven investigation.
- Built and deployed an ASN Attachment App on Azure Databricks to retrieve and process supplier documents, integrating REST APIs and automated data-ingestion pipelines with supplier portals to streamline document workflows and eliminate manual data entry.
- Secured REST API data flow integrity across 4+ cross-functional teams via WSO2 IAM, enforcing strict Role-Based Access Control for 500+ active shop-floor users.

Indian Institute of Technology, Hyderabad | Research Summer Intern Hyderabad, India (Remote)

May 2023 – July 2023

- Implemented a RISC-V ISA simulator emulating core instruction set architecture behavior in C++, demonstrating low-level systems execution, memory alignment, and computer architecture principles.

PROJECTS

Agentic Resume Analyzer | Python, LangGraph, LangChain, FastAPI, ChromaDB, Pydantic [Project Link]

- Architected an agentic evaluation pipeline using a 3-node LangGraph stateful graph to process candidate resumes against job descriptions via multi-query RAG (3 query angles, 18 candidate chunks per cycle) fused via Reciprocal Rank Fusion.
- Engineered a production-grade FastAPI backend with Pydantic v2 typed contracts, Server-Sent Events (SSE) streaming for real-time progress, thread-safe SHA-256 vector store caching, and a 4-stage self-healing JSON parser for resilient execution.
- Deployed 100% local LLM inference via Ollama (Qwen 2.5 3B) with environment-driven configuration, structured logging, and health-check endpoints—eliminating cloud API costs while preserving enterprise data privacy.

Chess Analytics ETL Pipeline | Python, DLT, DuckDB, MySQL, Power BI, DAX [Project Link]

- Built an end-to-end data pipeline processing 6.5M+ game records across 4 player profiles from the Chess.com public API using the DLT framework, with a custom Python migration layer handling schema mapping, NULL normalization, and type conversion.
- Designed an interactive Power BI analytics dashboard featuring 10+ DAX measures, bridge table modeling to resolve many-to-many player relationships, and 5 detailed analytical views.

TECHNICAL SKILLS

Languages: Python, SQL, C++

GenAI & LLM Engineering: LangChain, LangGraph, RAG Systems, Text-to-SQL, Vector Databases (ChromaDB, Pinecone), Prompt Engineering, Azure OpenAI, Ollama, Hugging Face Transformers, FastAPI, Pydantic

Data Engineering & Analytics: Azure Databricks, SQL Warehouse, Databricks Apps, DLT, ETL/ELT Pipelines, DuckDB, MySQL, PostgreSQL, Power BI, DAX

Cloud, Security & Tools: Azure (Data Lake, Databricks), Docker, Git/GitHub, REST APIs, WSO2 IAM, Postman, Figma

EDUCATION

National Institute of Technology Raipur, India

B.Tech in Computer Science & Engineering | CPI: 7.65

2020 – 2024

Delhi Public School, Kuwait

Class XII (CBSE): 90.2%

2019 – 2020

Class X (CBSE): 85.6%

2017 – 2018

ACHIEVEMENTS & CODING PROFILES

- 5 Star Rating at HackerRank in Problem Solving | Global Rank 312 (Starters 92, Div 4) at CodeChef
- Coding Profiles: GeeksforGeeks, LeetCode, HackerRank, CodeChef
